Zigpac

Target:
B2B Procurement
& Brand Design

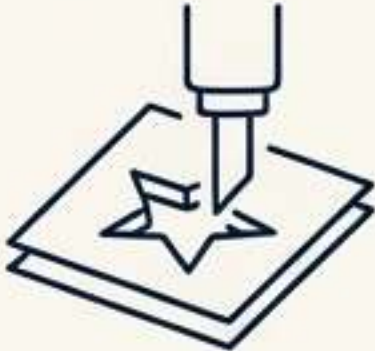

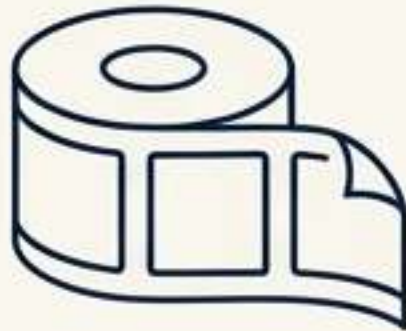

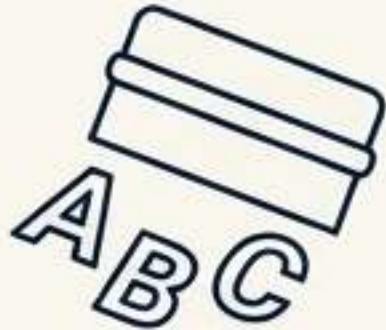

The Specification Sequence

Key Takeaway: Skipping sequence leads to inaccurate quotes. Complete all three phases before initiating an RFQ.

Validate Your Category Fit

Category Diagnostic: Wax Seals vs. Adjacent Options

Custom Wax Seal Stickers	Custom Die Cut Stickers	Custom Roll Labels	Custom Transfer Stickers
Best-fit use case is when the project specifically demands a classic, tactile wax seal aesthetic and application. 	Diverge here if the priority is custom shaping, specific material substrates, or individual handout distribution. 	Diverge here if the priority shifts to high-volume machine application or rapid manual peeling. 	Diverge here if the design requires isolated elements (decals) applied without a visible background. 

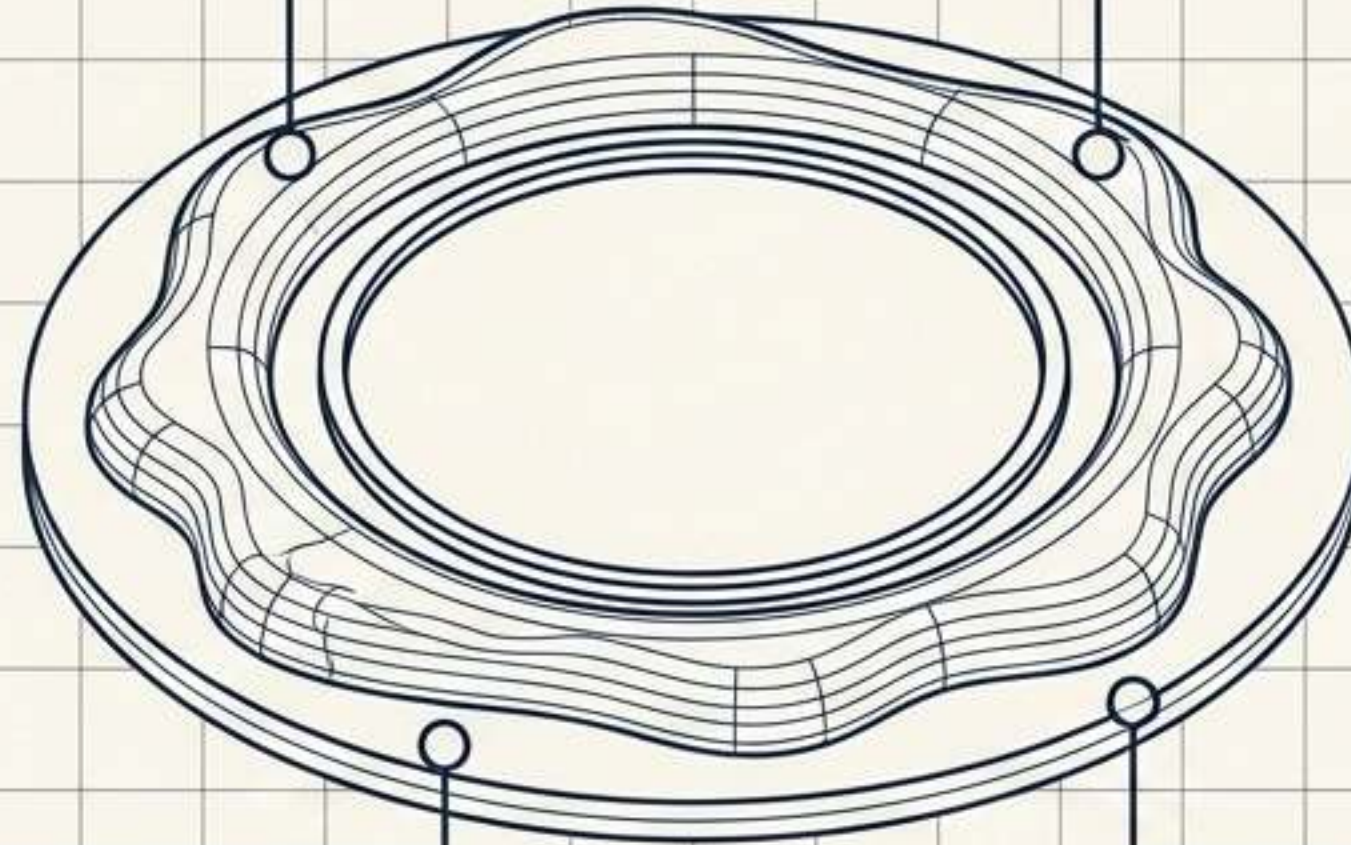

Physical Specification Anatomy

Size & Structure

Define exact dimensional footprint and structural depth.

Surface Finish

Determine the final textural and reflective finish.

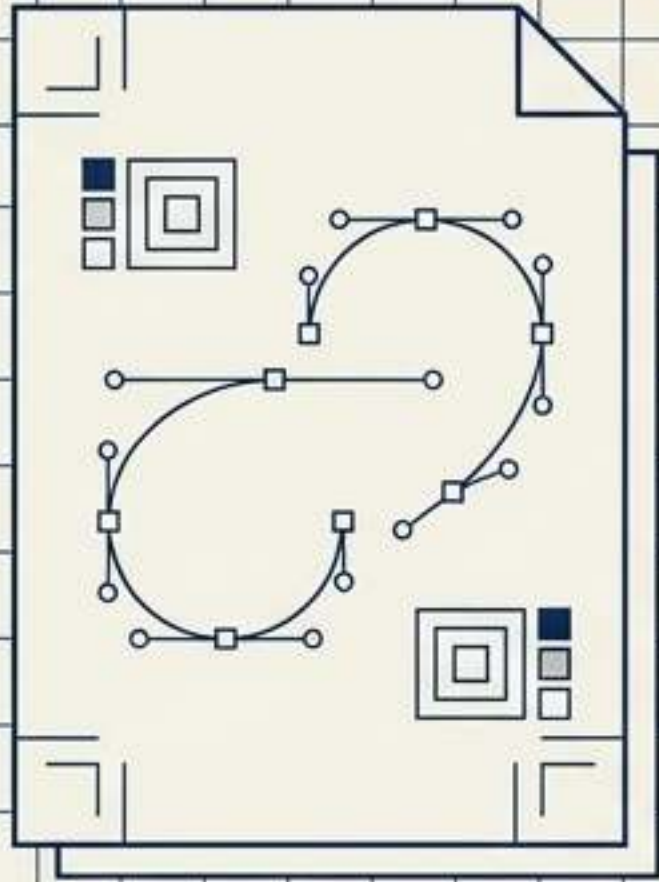

Material Direction

Select base material composition suitable for the intended handling environment.

Application Environment

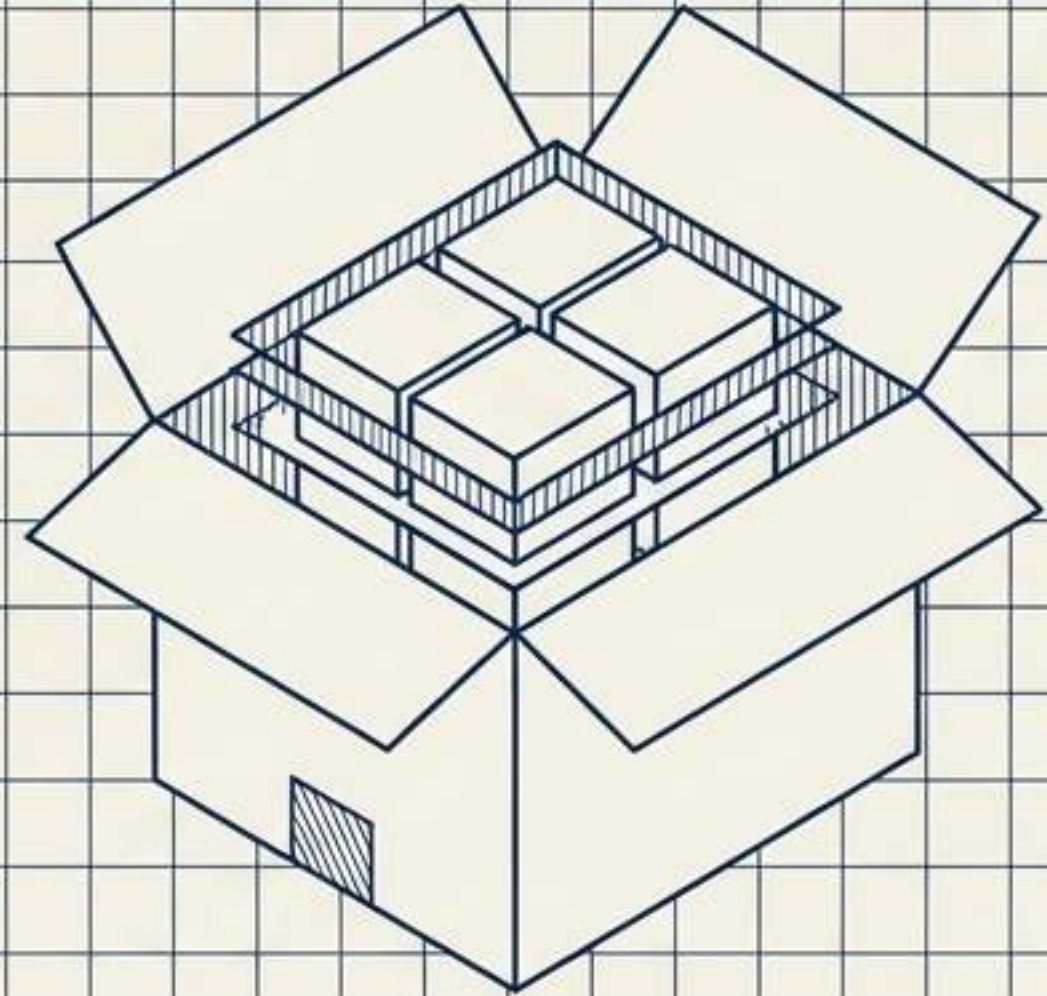

Where will the item be seen or handled? Real-world use case dictates material longevity needs.

Operational & Logistical Requirements

The Input: Artwork

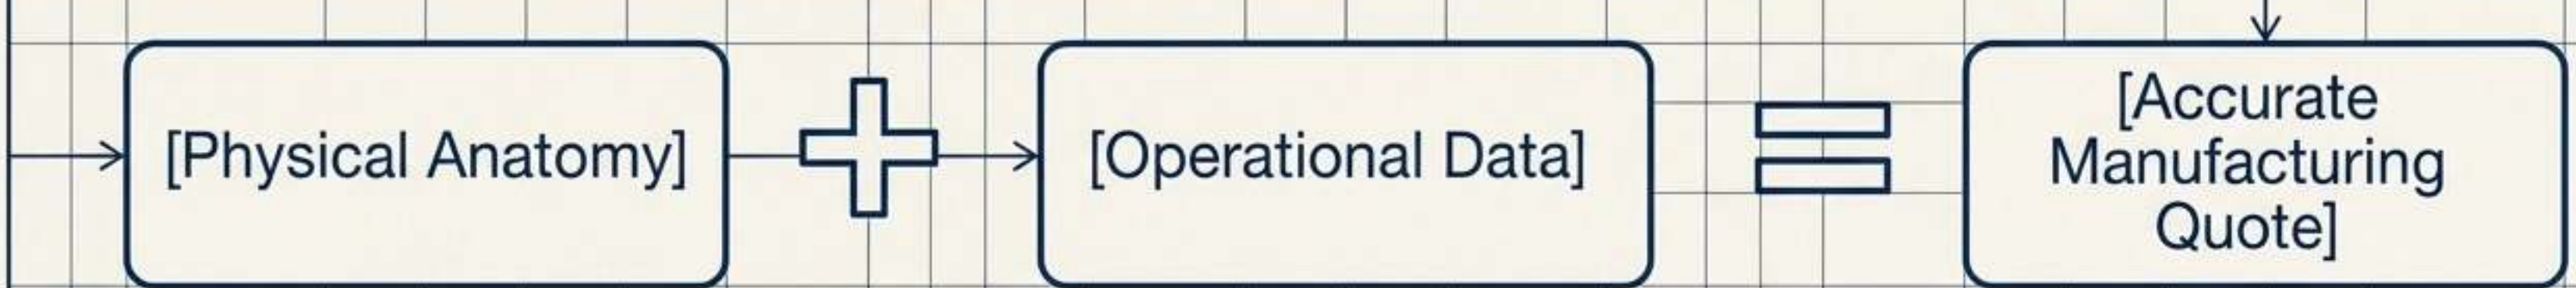

Artwork File readiness. Provide production-ready formats or exact visual references required for structural mapping.

The Output: Volume & Packing

Define your precise Quantity Target. Specify any unique Packing Needs (e.g., specific batching, protective layers) which directly impact production costs.

The Quote Equation & Production Risks

Crucial Procurement Rule: Do not assume fixed metrics before final specification review. The following are outputs of your specs, not universal guarantees:

➤ Minimum Order Quantity (MOQ)

➤ Production Lead Times

➤ Certifications

➤ Shipping Terms & Costs

RFQ Pre-Flight Checklist

Strategic & Physical	Logistical & Commercial
☐ Primary use case and handling environment confirmed. ☐ Wax Seal category validated against nearby options (Die Cut, Roll, Transfer). ☐ Exact size and structure dimensions mapped. ☐ Material direction and surface finish selected.	☐ Production-ready artwork file or reference prepared. ☐ Target quantity established. ☐ Specific packaging and batching needs defined. ☐ Acknowledged that MOQ and lead times await spec review.

Submit compiled dossier data to Zigpac for expedited quoting.
